

## WHAT IS BALANCER?

Balancer is an NPK fertiliser with added Sulphur.

### BALANCER can be used for:

- Fertilising grazing and silage fields
- Top dressing of cereals.

## WHY USE BALANCER?

### To Reduce P levels

- BALANCER allows the application of NPK without excessive/unnecessary amounts of Phosphorus (P) being applied.
- Lower P application has economic benefits for the farmer as well as environmental benefits.

### To include Sulphur in your fertiliser programme:

- Up to 30% more grass can be grown when Sulphur is applied.
- BALANCER allows Sulphur to be applied on a "little and often" basis which helps to avoid trace element problems associated with large applications of Sulphur.
- Sulphur can increase the protein content and digestibility of grass.

## APPLICATION RATE

### GRAZING

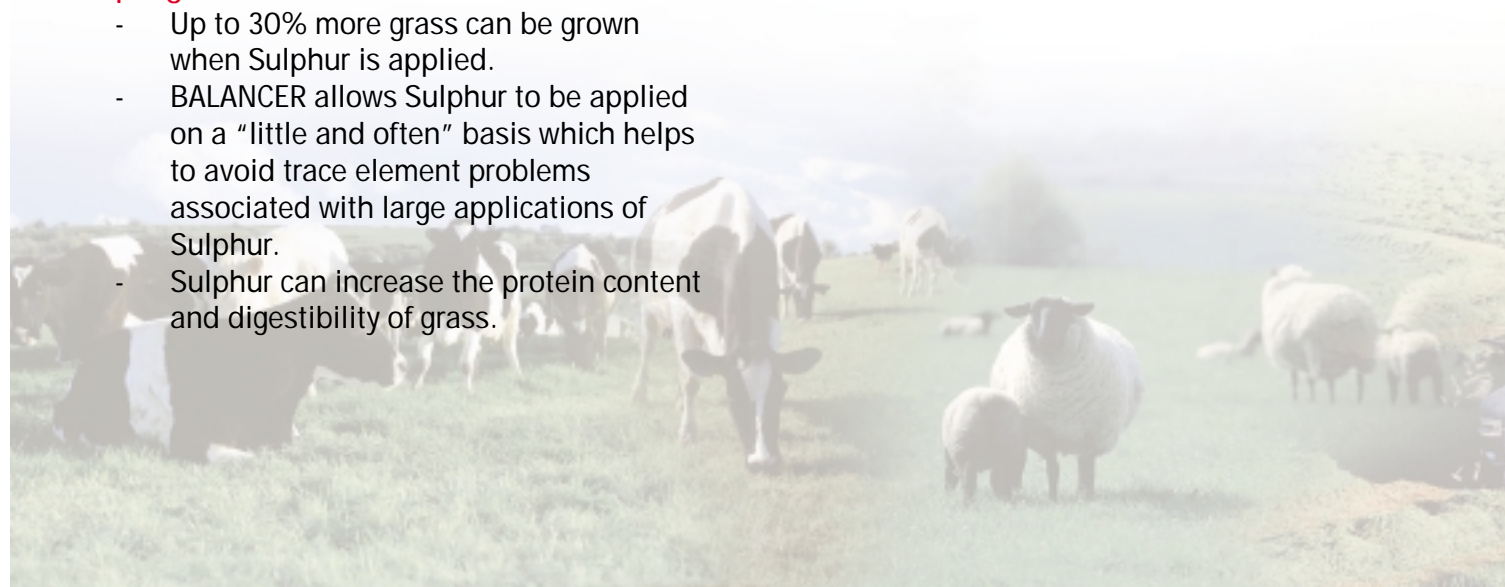

Grass	Application Time	Rate/Acre
Early Grass	6-8 weeks before turnout	2 bags/acre
General	After each grazing	1 - 1.5 bags/acre

### SILAGE/HAY

Suitable for first, second and third cut silage and hay. Apply 2-4 bags as required.

### CEREALS

Apply BALANCER at the normal NPK top-dressing levels.
