IMPROVING HERD HEALTH

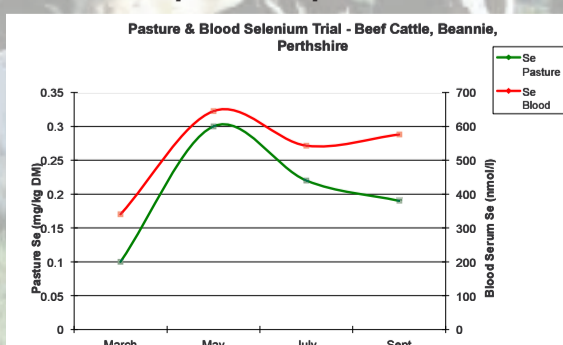

WHAT IS SELENIGRASS?

SELENIGRASS is a high Nitrogen fertiliser with added selenium, which is an essential trace element for animals.

WHY USE SELENIGRASS?

- *SELENIGRASS contains a vital trace element, selenium, which is required by all animals.*
- *The natural route for selenium intake by ruminant animals is from their green feed diet.*
- *The selenium in SELENIGRASS is a slow release granule which is the natural solution to boost low plant selenium levels.*
- *This selenium is released throughout the plant growing cycle boosting the selenium content at harvest or during grazing.*

Trial showing the uptake of Selenium by grass and animal after Selenium is spread on pasture.

FUNCTIONS OF SELENIUM

HELPS PREVENT

- *Problems with fertility and retained placentas*
- *Ill thrift*
- *White muscle disease*
- *Mastitis*

FUNCTIONS OF MAGNESIUM

- *Helps prevent grass tetany*
- *Stimulates appetite*
- *Improves nutrient availability*

APPLICATION RATE

GRAZING

Applying a minimum of 4 bags/acre/year of SELENIGRASS over the grazing season will help to correct your selenium deficiency.

SILAGE

SELENIGRASS is suitable for both first and second cut silage. SELENIGRASS helps to raise the selenium content of silage.

Apply 3-4 bags/acre as required.
