

Unlock your crops potential

AVAIL[®] Phosphorus Fertiliser Enhancer helps your crops reach their potential

Research shows that conventional phosphorus fertilisers can leave 75–95% of your fertiliser investment fixed in the soil during an application year.

AVAIL creates a “shield” that protects phosphorus to make it more available to the plant. Featuring exclusive SFP technology, phosphate enhanced with AVAIL requires no change in your application methods or rates.

How AVAIL works:

- Decreases phosphate tie-up, increasing phosphate availability to plants
- Increased phosphate availability is a key factor in increasing yield and quality
- Studies show all AVAIL-treated phosphate fertiliser can increase yields up to 5-15% when compared to standard phosphate fertilisers

AVAIL helps increase yield potential at a minimal cost.

AVAIL at a glance

- Lasts all season
- Apply directly to any phosphorus fertiliser
- Water soluble
- No environmental footprint
- Increases yield potential 5-15%

AVAIL

The AVAIL Difference

How does AVAIL help you get more from your phosphate fertiliser investment?

While the science behind AVAIL is complex, the idea is simple. Certain elements in the soil - calcium, iron, magnesium, aluminium, - "fix" phosphorus. This interferes with phosphates' ability to be absorbed by the plant.

AVAIL minimises the adverse effect of these elements on phosphorus fertiliser at the microenvironment level. AVAIL increases the potential for more phosphorus to be absorbed by the plants' root systems.

Reduced Fixation

By minimising the effects of calcium, magnesium, iron and aluminium in the soil, more phosphate remains free for uptake.

More Phosphate = More Yield Potential

With more phosphate uptake during plant development, especially during the crucial early stages, yield potential is increased.

Big Impact with No Footprint

AVAIL offers increased yields and higher returns for farmers with no environmental footprint. Simply put AVAIL means more phosphate for your crops and more yield potential for you.
